

Comparison of Relative Taxes

Comparison of Relative Taxes**Residential**

The purpose of this section of the report is to undertake “like” property comparisons across each municipality and across various property types. In total, 11 property types were defined based on those property types that were of most interest to the participating municipalities and that represented all potential optional classes. The Residential, Multi-Residential, Commercial and Industrial classes are represented in the study; classes where a municipality is typically competing for new growth opportunities.

Multi-Residential**Commercial****Industrial**

In order to calculate the relative tax burden of “like” properties, every effort was made to hold constant those factors deemed to be most critical in determining a property’s assessed value. However, given the number of factors used to calculate the assessed value for each property, and the inability to quantify each of these factors, the results should be used to provide the reader with **overall trends** rather than exact differences in relative tax burdens between municipalities.

Farmlands

By selecting multiple property types within each taxing class (Residential, Multi-Residential, Commercial and Industrial), and by selecting multiple properties from within each municipality and property subtype, where available, the likelihood of anomalies in the database has been reduced. However, it is recommended that focus should be on the trends rather than the absolutes.

Given that the selection process of properties is random based on properties meeting the outlined criteria, it would not be appropriate to use the selected property’s capped rate in the Multi-Residential, Industrial and Commercial classes. Using a property’s capped rates on a small sample could result in comparisons of properties in one municipality contributing to the cap and in another municipality benefiting from the cap. This would not provide a reasonable representation of the relative tax burdens in each jurisdiction for a typical property. As such, to provide a true indication of the relative tax burden, the tax liability on sample properties will be used in the comparisons. The tax liability was calculated using the property’s most current assessment and the 2007 tax rates for each municipality.

Notes

Urban rates were used in each municipality. In the case of the City of Hamilton, Ottawa, Norfolk, Greater Sudbury, Kawartha Lakes and Chatham-Kent, where amalgamations occurred and there continues to be area rating, the analysis was done by selecting properties from within the urban centres and applying the respective urban rates.

The City of Toronto due to the size and current value assessment differentials across the City has been divided into four areas; North, South, East and West.

For some property types, municipalities are not represented due to the lack of comparable properties available or a decision by the municipality not to include a particular category in the analysis.

General Introductory Comments

There are many reasons for differences in relative tax burdens across municipalities and across property classes. These include, but are not limited, to the following:

- The values of like properties varies significantly across municipalities
- The tax burden within a municipality varies based on the tax ratios used. As such, it is possible for a municipality to have a relative low tax burden in a particular class of property and a relatively high tax burden in another class
- The use of optional classes
- Non-uniform education tax rates in the non-residential classes
- Tax burdens across municipalities also vary based on the level of service provided and the associated costs of providing these services
- Extent to which a municipality employs user fees
- Access to other sources of revenues such as dividends from hydro utilities, gaming & casino revenues

Methodology and Presentation of Results

"Like properties" were selected using the property descriptions outlined on the next two pages. Every effort was made to select a minimum of 3-8 properties from each municipality and from within each property type.

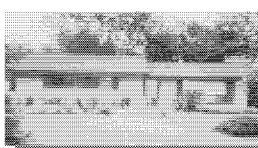

In some cases, a decision was made by the participating municipality to limit the number of property types to be included in the study. As such, for some property types, less municipalities have been included in the sample. In addition, there are some municipalities where like properties were not identified. An average was used across the sample set within each municipality to calculate the relative tax burden. The results are presented using appropriate tax unit values such as per acre (vacant land), per unit (multi-residential, hotels and motels), per sq. ft. (office, industrial, neighbourhood shopping). Number of units, square footages, acres and current value assessment was provided by MPAC.

Property Types

Residential

Residential - Single Family Detached Home (Property Code 301)

A detached three-bedroom single storey home with 1.5 bathrooms and a one car garage. Total area of the house is approximately 1,200 sq. ft. and the property is situated on a lot that is approximately 5,500 sq. ft. Comparison of taxes on a per household basis.

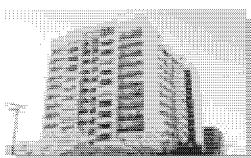

Residential – Senior Executive (Property Code 301)

A two-storey, four or five bedroom home with three bathrooms, main floor family room plus atrium or library. A full unfinished basement and an attached two car garage. The house is approximately 3,000 sq. ft., with an approximate lot size of 6,700 sq. ft. Comparison of taxes on a per household basis.

Multi-Residential

Multi-Residential - Walk-up Apartment (Property Code 340)

Multi-residential, more than six self-contained units but does not include row housing. Typically this type of property is older construction, two to four storeys high. Comparison of taxes on a per unit basis.

Multi-Residential - Mid/High-Rise Apartment (Property Code 340)

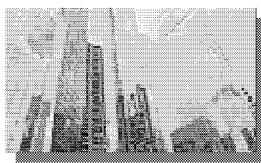

Multi-residential, more than six self-contained units and four + storeys but does not include row housing. Comparison of taxes on a per unit basis.

Commercial

Commercial - Neighbourhood Shopping Centre (Property Code 430)

A neighbourhood shopping centre is typically the smallest type of center comprising of retail tenants that cater to everyday needs such as drugstores, convenience stores and hardware stores. Size varies from 4,000 to 100,000 square feet. Comparison of taxes on a per square foot of floor area

Commercial - Office Building Class (Property Code 402)

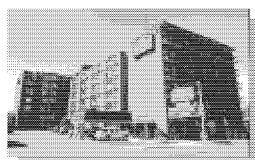

Selection was focused on buildings in prime locations within the municipality. Comparison of taxes on a per square foot of gross leaseable area basis.

Property Types

Commercial Cont'd

Commercial - Hotel (Property Code 440)

Typically over 100 rooms. Comparison of taxes on a per suite basis

Commercial - Motel (Property Code 450)

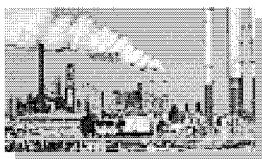

Typically newer construction, franchised. Comparison of taxes on a per suite basis

Industrial

Industrial - Vacant Land (Property Code 106)

Selection of properties were based on serviced land under 5 acres

Comparison of taxes on a per acre basis

Industrial - Large Industrial (Property Code 520, 510,513)

Greater than 125,000 sq. ft.

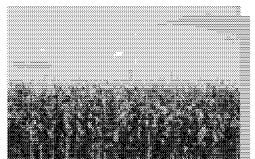

Comparison of taxes on a per square foot of floor area basis

Industrial - Standard Industrial (Property Code 520, 510,513)

Under 125,000 sq. ft. in size typically characterized by newer construction and flexible design. Comparison of taxes on a per square foot of floor area basis

Farmland

Farmland Price Per Acre

This has been calculated by receiving information from MPAC on the cost per acre for Class 1 and Class 6 farmland on a per acre basis. This reflects the full range of farmland property.

Presentation of “Like” Properties

Given the size of the survey, it is difficult to graphically present 79 municipalities. As such, the survey of “like” property comparisons have been divided into four graphs:

- Populations less than 20,000
- Populations between 20,000-49,999
- Populations between 50,000-99,999
- Populations 100,000 +

This grouping does not suggest which municipalities are most comparable, but is done simply for ease of viewing.

The following table provides the municipal groups sorted from lowest to highest population.

Municipalities with populations less than 20,000	Municipalities with populations 20,000 – 49,999	Municipalities with populations 50,000 – 99,999	Municipalities with populations 100,000 or greater

Residential Comparisons - Detached Bungalow

The charts on the following pages provide the relative taxes on a detached bungalow across the entire survey from lowest to highest.

- The inclusion of the CVA bungalow ranking and the net levy per capita in each municipality reflects some of the key factors impacting the relative tax position.
- The taxes in the detached bungalow category of property ranged from \$1,701 to \$4,193.
- Current assessment ranged across the survey from a low of \$101,250 to a high a \$491,594, with an average of \$210,850.
- A municipality's relative tax burden is a function of a municipality's net expenditures and the relative values of like properties
- The significant range in residential housing values, compounded with the range in municipal taxation and municipal programs and services, results in a large range in the relative taxes across the survey

***Multi-Residential Comparisons - Walk-up Apartment
(taxes calculated on a per unit basis)***

- Tax ratios are a reasonably good predictor of a municipality's relative tax position
- Toronto, Hamilton, Guelph, Dufferin (Orangeville), Thunder Bay, Windsor, Woodstock, Owen Sound, Tillsonburg and the City of Kingston have some of the higher tax ratios resulting in higher relative tax burdens
- With low Multi-Residential tax ratios, Barrie, Sault Ste. Marie and York and Muskoka municipalities tended to have lower relative tax burdens in the Multi-Residential Class
- The average CVA per suite was \$52,000, with a range from \$26,000 to \$85,000

Multi-Residential Comparisons - Summary

- There was a high degree of consistency in terms of the relative tax burdens across the two multi-residential property types
- Municipalities with higher tax ratios typically also have higher relative tax burdens in the multi-residential class. The tax ratio is a better predictor in the multi-residential class than the commercial and industrial classes because of the consistent Province-wide residential education rate
- All York municipalities, with a Multi-Residential tax ratio equal to the Residential class have a low relative tax burden
- Toronto, Dufferin, Oxford, Belleville, Northumberland, Guelph, Hamilton, St. Thomas, Thunder Bay, Windsor, Cornwall, Lambton and Kingston with relatively high Multi-Residential tax ratios have Mid-high to High tax burden compared to the other municipalities in the survey

Commercial Comparisons - Office Buildings

- 15 of the 79 municipalities were not represented due to insufficient comparable properties
- The CVA per unit varied across the survey, with a range of \$35 to \$166 per square foot, with an average of \$82 per square foot
- The taxes on a per square foot basis ranged from \$1.47 to \$6.72
- The average and median taxes per square foot for office buildings were \$2.94 and \$2.86 respectively
- The average square footage of the office building class is approximately 53,600 sq. ft.
- On average, education comprises 48% of the total taxes
- The addition of a non uniform education tax rate results in a change in the relative tax position across the survey

The charts on the next page provide a sorting from lowest to highest in terms of total taxes for each of the population groupings. The group average and the total survey average are shown on the graph. Education and municipal taxes are shown in different colours to help identify the impact of non-controllable education taxes.

Commercial Comparisons - Neighbourhood Shopping

- Only 1 of the 79 municipalities was not represented in the neighbourhood category
- Neighbourhood Shopping properties was one of the better commercial comparators in terms of identifying like properties in all but one of the municipalities
- The average square footage of the properties selected was approximately 32,000 square feet
- The average current value assessment across the survey for neighbourhood shopping was \$98 per square foot, ranging from \$44 to \$179 per square foot
- The average relative tax burden in this class was \$3.43 per square foot

The charts on the next page provide a sorting from lowest to highest in terms of total taxes for each of the population groupings. The group average and the total survey average are shown on the graph. Education and municipal taxes are shown in different colours on the graphs to help identify the impact of non-controllable education taxes.

Commercial Comparisons—Hotels

- The average number of rooms across the survey for hotel properties is 136 rooms
- The average current value assessment per unit for hotels in the survey is \$55,000 per room, however, there was a significant range in terms of CVA values from \$20,000 to \$130,000
- 32 municipalities were not represented in the sample, either due to the municipality's size and lack of a representative property, or because the participating municipality elected not to be included in all property types

Industrial Comparisons - Standard Industrial

- 77 of the 79 municipalities are represented in the standard industrial comparison (Wellesley and Wasaga Beach did not have representative properties)
- The standard industrial properties have an average current value assessment per square foot of \$44 with a range of \$15 to \$92 per square foot
- Education rates are determined by the Province and are not uniform - as such, the addition of industrial education rates changes the relative position of properties
- The average total taxes of the survey is \$1.91 per square foot

Trends and Observations - Large Industrial

- 65 of the 79 municipalities were represented in the Large Industrial comparison
- Of the municipalities surveyed, Hamilton, Sudbury, Chatham-Kent, Ottawa, Windsor, Timmins, Thunder Bay, St. Thomas, Sault Ste. Marie, and the Counties of Essex, Lambton and Grey established a large industrial class
- The average current value assessment for large industrial properties in the survey is \$29, with a range from \$10 to \$63
- The average square footage of properties included in the survey is 331,000
- The average total taxes in this class is \$1.35 per square foot

- The average value for an acre of industrial land across the survey is \$110,000. The CVA ranges from \$24,000 to \$481,000 per acre across the survey
- Every effort was made to select serviced properties between 1 and 5 acres. The properties selected were serviced land averaging 2 acres - this provided better comparators upon which to complete the relative tax burden analysis
- The average property tax is \$2,969 per acre

Industrial Comparisons—Industrial Vacant Land—by Population Group

Industrial Vacant Land Property Taxes - Municipalities with populations less than 20,000

Farmland Property Taxes

BMA received requests during the last few years to include a relative tax burden analysis for Farmland properties. The approach undertaken was to contact MPAC to provide the CVA per acre for Class 1 and Class 6 farmland properties to provide the full range of Farmland taxes across the survey. The survey focused on those municipalities with a reasonable proportion of Farmland assessment composition.

Class 1 Farmland property is described as being the highest quality with good drainage, high quality loam texture, is nearly level and there are no physical limitations to the ability to farm the land.

Class 6 Farmland property is described as lower quality land with steep slopes, severe erosion, shallow soil and features that make cultivation impractical.

**Farmland
Property Taxes**

Municipality	Taxes Per Acre		Taxes Per	
	CVA Class 1 Farmland	Class 1 Farmland	CVA Class 6 Farmland	Acre Class 6 Farmland
Amherstburg	\$ 4,600	\$ 15.28	\$ 700	\$ 2.33
