

BLASTING

Before Construction:

If blasting is required as part of the construction, you will be contacted regarding a pre-blast survey of your home to be completed prior to blasting operations commencing.

The pre-blast survey is conducted by a third party consultant and is a visual inspection of your home and other structures complete with photos and/or video. The consultant will be required to enter the home to complete the interior portion of the survey.

During Construction:

During blasting operations you can expect to feel some vibration and hear some noise. The sound following the blast is a shock wave or air concussion, which is harmless. Vibration levels are monitored during the blasting operations by the consultant to ensure levels are within allowable ranges.

After Construction:

Once the work is complete, upon request to the Contractor, the post-blast survey of your home can be made available to you.
