

TEMPORARY WATER BYPASS SYSTEM

- Residents in the area of construction will be connected to a temporary water bypass system so you will continue to receive municipal water service while work is underway. This temporary system consists of connecting your outdoor water faucet to a hose designed to carry potable drinking water. The City's Contractor will have access to your property to connect this temporary bypass system.

Will Your Water Service Be Interrupted?

There will be two brief water service interruptions, once to connect the temporary water bypass system and a second time to connect the new watermain to the existing service at the property line. Residents will be notified in advance of any interruptions to water service.

How Will You Be Charged For Water?

Your consumption will not be metered when receiving water from the bypass system. Instead, you will be charged a construction period flat rate.
